

## Cardiology Physician Assistant

The Cardiology Physician Assistant is responsible for providing expert medical care and support to patients with cardiac diseases, in collaboration with the cardiologist. The Physician Assistant will provide assessment and management of patient care, including physical examinations, diagnostic, medical management, and patient education. The Physician Assistant will collaborate with the cardiologist to develop diagnostic and treatment plans, order and interpret diagnostic tests, and provide follow-up care. The Physician Assistant will also be responsible for maintaining accurate medical records and providing timely documentation of patient care. The successful candidate should possess a current Physician Assistant license, excellent communication skills, and a patient-focused approach.

### Role Purpose

The purpose of a Cardiology Physician Assistant (PA) is to provide medical care and support to cardiologists and patients in a clinical setting. The role involves providing comprehensive clinical care to patients with cardiovascular conditions, including assessment, diagnosis, treatment, and follow-up. The Cardiology PA also assists the cardiologist in providing direct patient care, helping to manage patient education, ordering tests and procedures, and providing a wide range of support services to ensure the best possible care.
