Procedure:
- Initiation & Titration of Oxygen by mask or nasal prongs to maintain $\text{SaO}_2 \geq 95$, unless patient has history of COPD. If patient has COPD, maintain $\text{SaO}_2$ of 88-92%.

Indications:
Signs and symptoms of one or more of the following actual or potential:
- Respiratory distress
- $\text{SaO}_2 \leq 94\%$ or below established desirable range for the individual patient
- Hemodynamic instability
- Evidence of suspected hypoxemia (chest pain, tachycardia, haemorrhage, hypovolemia, sickle cell, altered LOC, trauma, smoke and/or toxin inhalation)

Note:
- If signs and symptoms and/or $\text{SaO}_2$ levels do not improve promptly, notify physician.
