

**Location:** GoToMeeting, Toronto

**Date:** May 17, 2021 (MONDAY) **Time:** 7:00 PM

**Presenter:** Priya Narula (Physician Assistant at LMC Bayview)

## Meet Mariam, a 59-year-old woman diagnosed 17 years ago with type 2 diabetes.

As her diabetes progressed, treatments were added in a stepwise approach, leading to spikes in A1C. Today, she's approaching target A1C, but afflicted with complications due to years of suboptimal control.

**But what if we had another chance at treating Mariam? With the wave of novel treatments since her diagnosis, could we change Mariam's health trajectory if she were instead diagnosed today?**

Join us as we explore the latest recommendations and treatment options and discuss ways to make an *early* impact on type 2 diabetes.

### Agenda

#### Time

**7:00 – 8:00 PM** Changing trajectory - Making an early impact in type 2 diabetes

#### Program objectives

1. Recognize the benefits of achieving early control
2. Compare antihyperglycemics, with a main focus on the oral options
3. Discuss practical considerations for integrating new treatments earlier
4. Self-reflect on current practice and identify opportunities to optimize patient care

**8:00 - 8:05 PM** Evaluation/ program end
